

ACCESS CONTENT FROM ANYWHERE

Mobius View

A SINGLE INTERFACE FOR MULTIPLE USERS

All employees—regardless of location, role, or computing platform— require access to critical and related information that is typically scattered throughout an organization. Customers, partners and suppliers may also need access to similar information. By providing an efficient and easy-to-use user interface with REST APIs to access that information, organizations are able to eliminate the use of multiple user interfaces.

Mobius View is an intuitive, modern, user interface for the Mobius Content Services Platform. It does not require client Java applets and plug-ins, improving security, administration and maintenance. Mobius View gives enterprise architects the ability to quickly and easily add REST API calls to any Web application to search, access, view, download, and link enterprise content.

VIEWING MADE EASY

Mobius View automatically reformats and Web-enables content without changing or copying original content for secure delivery and safe viewing. It can also open content that is archived application-specific for viewing with an external application, e.g., Microsoft Excel. Users can see multiple views of the same content e.g., by date, by time, and by customer without replicating documents. Documents can also be manipulated (e.g., zoom in/out) and rotated to further ease viewing documents.

ACCESS TO ALL CONTENT

REST APIs are ideal for organizations that need to retrieve and view content in any existing Web services-based system or application with business processes. Enterprise architects perform the customization in the web pages directly, instead of Java developers doing the customization in server code that needs to be compiled and redeployed. Rest APIs are reusable making them deployable anywhere customers need access to content in the enterprise.

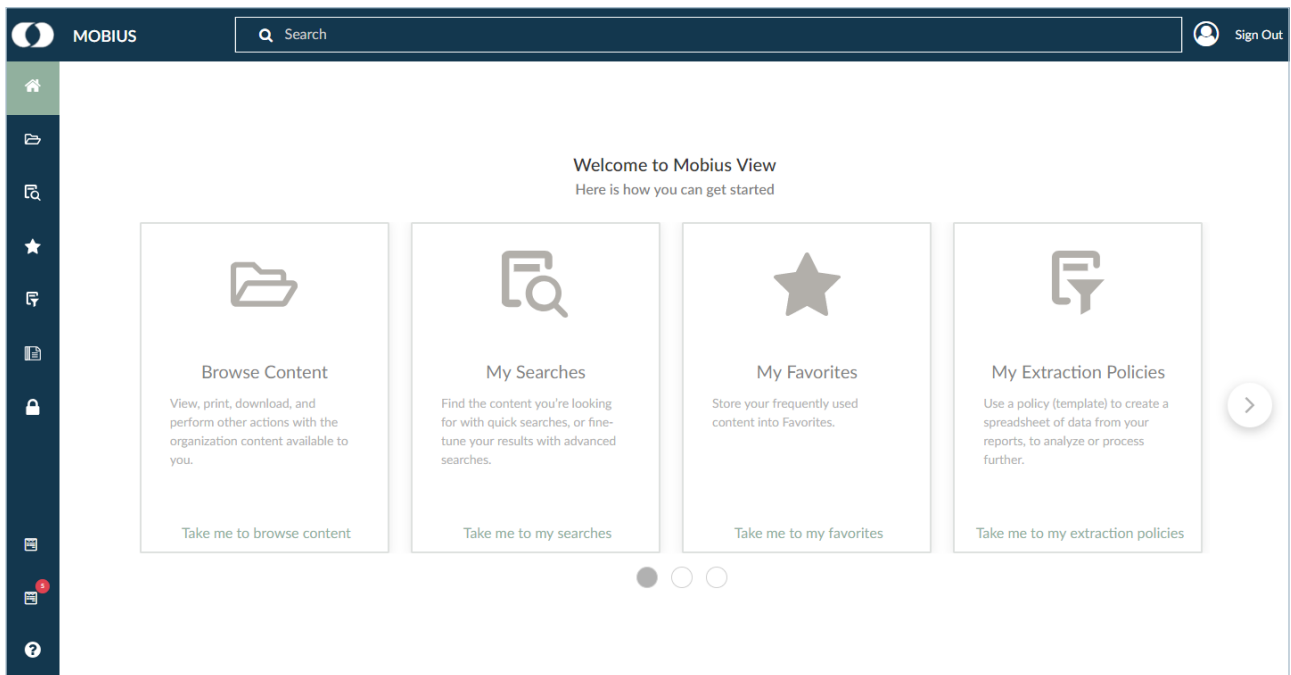

POWERFUL SEARCH CAPABILITIES

Mobius View can perform full-text search against connected content repositories and databases for documents and associated content – all searches can be saved and be reused as needed. Searches can also be filtered by field or line to improve search results. Mobius View supports collaboration and ease-of-use by allowing users to create, save and share form-based public searches for easy access by multiple authorized users.

MAIN FEATURES

- Uses REST APIs to access and retrieve content
- Converts documents into Web-ready formats
- Provides multiple views of the same content
- Comes with full-text search
- Allows searches to be saved and shared with multiple users
- Supports multiple web browsers

ENHANCED CUSTOMIZATION

Mobius View can be customized and stylized by having company logos, images, headers, and/or footers added to the Web-based user interface without building a custom application. Web developers can also globally change fonts, colors, and images.

CONFIGURATION AND ADMINISTRATION

Using Mobius View with standard Web browsers, enterprise architects can install and configure Mobius View easily and very quickly. And with an automated self-correcting facility, the Mobius View has high-availability with high-speed performance, load balancing, and failover support.
