

## TRANSFORM YOUR BUSINESS

Mobius Content Services Platform

### GIVE YOUR BUSINESS INFORMATION INTELLIGENCE

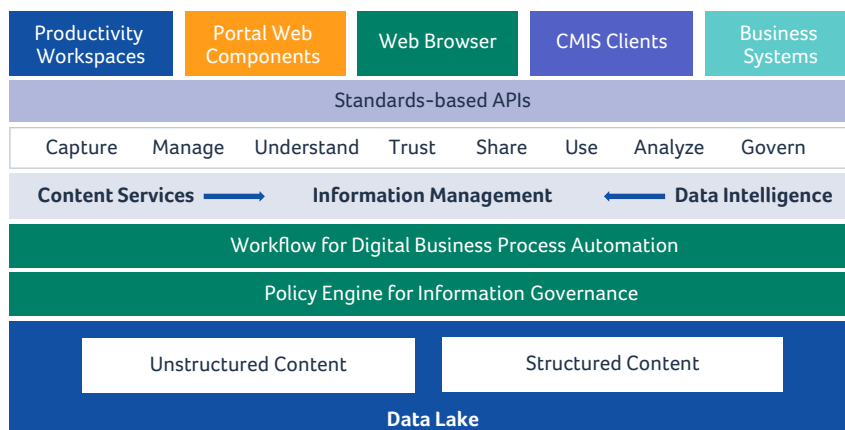

Mobius is a modern content services platform that is implemented on the cloud, on premises, or in a hybrid environment. It is architected to take advantage of Amazon Web Services (AWS) and Microsoft Azure cloud computing capabilities including content and data security, availability and auto-scaling.

Mobius uses REST APIs for standards-based application and system integration and its policy foundation provides a consistent means to govern, manage and retain information.

### APPLY POLICIES TO SYSTEMATICALLY MANAGE INFORMATION

Mobius helps organizations properly manage the volume, variety and velocity of enterprise content and data. Your business will have the ability to precisely and securely control the accuracy and life cycle management of information with Mobius content services and its granular policy management functionality. This ability includes ingestion, classification, access, encryption, redaction, retention, and destruction at web-scale loads.

Mobius gives you access and control of your corporate information to manage it in accordance with corporate policies and government regulations, while keeping it simple for business users, so they don't have to be aware of which application generated the content or where it is currently being stored to access it.

Mobius granular policy management foundation, flexible architecture, and near-infinite horizontal scaling allow you to manage unlimited amounts of enterprise information reliably and accurately.

### BENEFITS

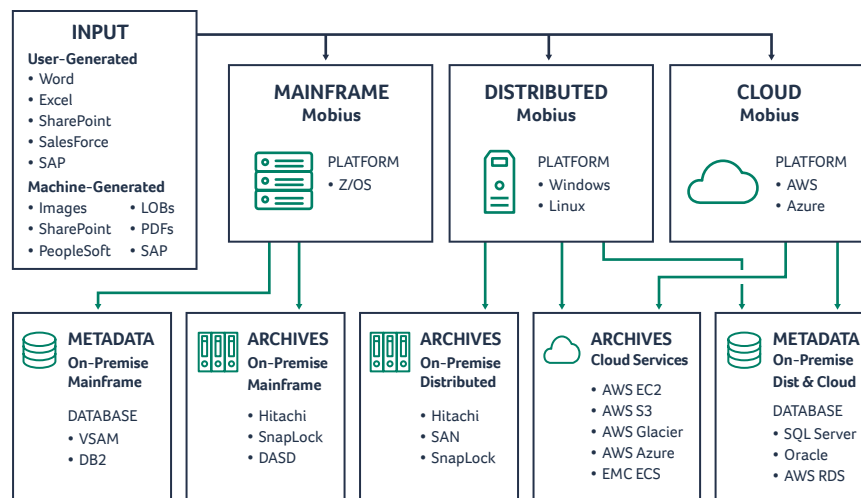

- **Greater efficiency** – information can be securely accessed anytime, anyplace, anywhere
- **Improved operational performance** – information is managed by centralized policies
- **Greater assurance** – information is managed to be secure and compliant
- **Increased effectiveness** – systems can be consolidated and then deployed in the cloud or a hybrid content environment
- **Increased profitability** – total cost of ownership can be reduced with less maintenance

## AUDIT AND VALIDATE INFORMATION FOR ACCURACY

Mobius uses Audit & Analytics Services to continuously audit, validate and analyze business data to ensure data integrity exists between systems, spreadsheets, documents and sources of information. This minimizes inaccurate and incomplete business information. Mobius streamlines repeatable tasks for gathering, prepping, comparing, and summarizing data and performs them at machine speed. Your back-office staff can reprioritize their time to research and resolve critical issues, all while giving business users confidence knowing that their information is accurate and correct.

## DEPLOY ANYWHERE AND FEDERATE ACCESS

Mobius offers incredibly flexible deployment models (on-premise, private cloud, public cloud, and hybrid environments) without the need to reprocess managed archives when moving between platforms. Mobius can help you federate and migrate any content type from any application regardless of size, format, volume, or platform. You can systematically rationalize enterprise content, reduce content sprawl, and retire costly and outdated legacy systems and content applications—all without interruption to lines-of-business, pleasing business users and addressing ever-evolving compliance requirements.

Mobius offers flexible deployment options, supporting on-premises, cloud, and hybrid environments, capturing and delivering enterprise information that adheres to in-house policies.

With the Mobius granular policy management foundation, flexible architecture, and near-infinite horizontal scaling, you can manage unlimited amounts of enterprise information reliably and accurately, in accordance with corporate policies and government regulations. Mobius gives you the required mix of content services deployed on-premise, as well as public and private cloud computing environments, to meet the specific needs of your executives, IT management and line-of-business users throughout your organization.

## USE CASES

### Digital Transformation

- Streamline end-user access paths and processes with Federation Services
- Gain efficiency and accuracy for back-office employees with Audit & Analytics Services

### Cloud-First and Hybrid-Cloud Initiatives

- Embrace the cost savings, versatility and elasticity of true cloud deployments

### Compliance Projects

- Manage information to comply with information privacy and data protection laws
- Apply encryption at rest and records management to user-generated content
- Implement fraud detection and continuous monitoring system

### Cost Reduction Initiatives

- Decommission and rationalize aging content applications
- Optimize storage and archiving costs by leveraging the cloud
