MOBIUS CONTENT SERVICES

Modernize, Govern and Transform
Content-Rich Processes

# MODERNIZE AND GOVERN WITH MOBIUS CONTENT SERVICES PLATFORM

Empowering highly regulated organizations to become more agile, efficient and effective.

ASG Mobius Content Services (Mobius) centralizes business-critical content in one secure location, and then delivers the relevant information when and wherever it is needed. It enables organizations to take control of its information and processes in a secure environment.

Mobius is a modular, open, Rest API-led platform that provides an open, flexible, and scalable architecture to manage large volumes of information. It captures, governs, distributes and outputs digital content and assets generated by people, applications and machines at web-scale volumes and high-performance levels on-demand. The Mobius architecture supports open standards, leverages cloud capabilities and supports deployments on public and private cloud, on-premises and in hybrid-cloud configurations. Its design make it easy to connect applications, stream federated content and automate business workflows driving mission-critical business processes.

CONTENT-RICH PROCESS AUTOMATION

Mobius Automation capabilities enable administrators, business analysts and power users with modern, low-code/no-code process and presentation services to reimagine content-rich workflows, processes, and experiences. Built to simplify content-rich process automation, Mobius Automation capabilities arm professional and citizen developers with both comprehensive automation capabilities and a simplified design experience. Using one design studio, teams can quickly design, test and deploy solutions to content-rich process problems that improve the organization's responsiveness to continuous market and regulatory change.

CONTINUOUS AUDIT AND ANALTYICS SERVICES

Combined with ASG's Audit & Analytics Services (A&AS), Mobius delivers a policy-based, rules-driven, data analysis and data quality business process automation solution. A&AS continuously scans corporate information regardless of type, source and volume to detect, analyze and prevent data discrepancies. It compares and validates unstructured data and content with the corresponding information found in structured reports, invoices, customer statements and other documents to ensure data integrity exists between systems, spreadsheets and sources of information.

COLLABORATION

Mobius provides integrations with key systems and productivity tools organizations use the most to facilitate collaborative work streams. These integrations connect documents and processes, eliminating data silos, increasing efficiency and maintaining governance.

The Mobius Integration for Microsoft® 365 provides the essential connection between content and business processes that enables organizations to maximize their investments in Mobius and Microsoft while accelerating collaboration and efficiencies across the organization. This integration allows Microsoft documents to be viewed directly inside of Mobius and users have the option to view or edit Microsoft content in the native application at the push of a button. It also eliminates switching between screens to access the right information, supporting end user productivity. The ability to allow access of multiple versions of Microsoft documents at once makes the process more consolidated and efficient, saving time and resources.

Mobius solutions for Microsoft enable organizations to gain control over rapidly growing and disparately stored information across the organization. Mobius helps ensure compliance and control of valuable organizational information across Microsoft Teams, SharePoint® and Office 365® by discovery, automatic redaction and additional levels of security.

Integrating Mobius with SAP streamlines manual processes that feed or rely on information from your SAP system, such as invoice processing in Accounts Payable or cash application in Accounts Receivable. With Mobius, organizations automate the delivery and receipt of information to those who need it while providing visibility into the status and performance of processes.

" We work with a tremendous amount of content and needed a solution that could help us make its delivery more collaborative — from publishing and storage to access and distribution. ASG's storage and processing capabilities surpassed other vendors. Thanks to the ease of use and integration with our existing SharePoint system, the deployment was non-disruptive to the business and required very little training. "

Leverage Microsoft 365 with Mobius View

INFORMATION GOVERNANCE

SOPHISTICATED INFORMATION GOVERNANCE SERVICES

Mobius provides sophisticated policy-driven governance services, including time and event-based records management, policy administration management and redaction. These services enable administrators to manage and automate enterprise content life cycles precisely and securely. Managed through a centralized records management and policy administration editor, administrators can uniformly and concisely apply complex business rules to meet stringent records management, data security and information privacy regulations.

Policy driven compliance built into Mobius improves security by restricting content access by time of day as well as geographic location. It also easily defines comprehensive business rules to govern and put into action content. It uses standards for decision modeling and integration, applying information governance consistently regardless of content source and access point.

Content-based policies set rules to capture, classify, encrypt, redact, retain and dispose of records, giving you the ability to comply with corporate governance and government regulations. Requirements for privacy regulations such as the General Data Protection Regulation (GDPR) and the California Consumer Privacy Act (CCPA) for the deletion and transference of data are supported.

Role-based policies within Mobius govern who can access, view and modify content. This enables organizations to reduce both the complexity of assigning user access rights and the associated costs in addition to ensuring compliance by controlling who has access to what.

" Our selection team chose Mobius unanimously in 2004, and the decision has proved to be the right one. Mobius scaled to enable our insourcing business and our merger with Deutsche Bank. It adapted to new European Union regulatory requirements. Mobius archives massive amounts of data from multiple sources and enables secure access to it within seconds. "

Gerold Blasig
Project Manager, Competence Center Channels, Services & Sales
Postbank Systems AG

***

" ASG Content Services is very easy to use. After we went live, my team reduced our 10- to 12-day invoice backlog to one to two days. Better yet, almost overnight we went from a data processing environment to an analytical environment. Our users made the transition beautifully. Complete visibility into the process has enabled us to become far more efficient. "

Director of Accounts Payable at the University
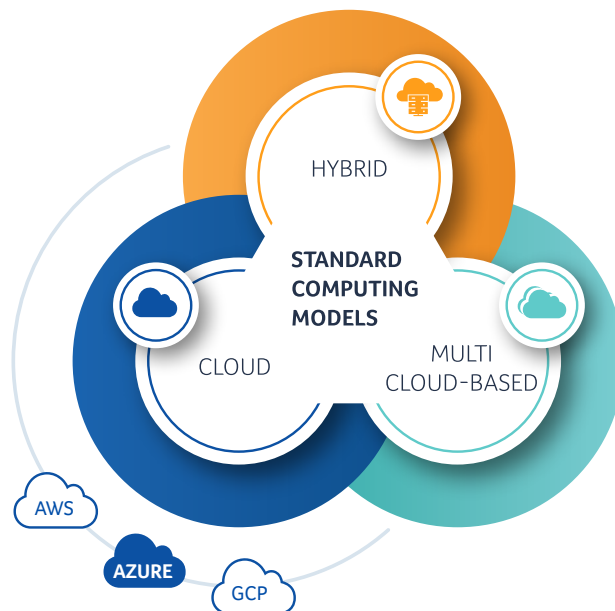

UNIFIED CONTENT FEDERATION

Mobius provides application-level integration for federating multiple content silos and information stores regardless of size, format, volume or platform. Administrators can reduce content sprawl, uniformly apply advanced governance policies to information and retire costly and outdated enterprise content management systems, without interrupting lines-of-business. Moving enterprise content between platforms does not require reprocessing of data and managed archives.

Federation provides a single view of content in repositories across the organization:

- Purpose-built connectors exist for many widely adopted applications, including SAP®, IBM CMOD, IBM FileNet, OpenText Content Suite, OpenText Documentum, Microsoft Office®, Microsoft SharePoint®, Salesforce and more. These specific integrations seamlessly feed information and documents between Mobius and other applications

- Screen-level integrations empower users to access documents, create forms and begin workflow processes directly from business applications such as Microsoft SharePoint and SAP

- Federated redaction enables redaction policies to be applied to personally identifiable information (PII) in multiple content stores automatically or "on the fly"

CLOUD MODERNIZATION

Mobius uses Docker for containerized, fast and simple deployments and Kubernetes for orchestrating containers. This deployment model gives IT leaders and administrators the flexibility to deploy on-premises, private cloud, public cloud and hybrid-cloud environments and improve time to value. Standards-based REST APIs are used to connect and interact with Cloud Services, allowing IT teams to leverage cloud capabilities for elasticity and scale.

"*ASG Technologies Mobius suite allows us to stay nimble with the changing challenges in our industry. Liberty Mutual and my team members are very happy with the direction Mobius software is going. With the cost savings we expect to see from implementing Mobius on AWS, we will begin to reinvest savings into new development rather than ongoing maintenance.*"

Eric York
Technologiest / Acting, Architect for Commercial Insurance Document Solutions
Liberty Mutual

ENHANCED CONTENT MANAGEMENT

Employees and collaborative workgroups can create and update documents with full content revision control (check-in / check-out). The native optical character recognition (OCR) scanner empowers end-user to extract and full-text index unstructured data trapped in images and PDF's with images. Documents stored in Mobius utilize a policy wrapper to govern content driven interactions such as workflows, redaction and legal holds.

STREAMLINED CONTENT DISTRIBUTION SERVICES

Mobius Output Services arms developers with a unified set of REST APIs to centrally control the output, distribution and delivery of electronic documents regardless of document type, distribution method and output channel. It controls the delivery, including pull printing and outputs documents across web, mobile and print channels simultaneously without requiring multiple copies and predefined format conversions.

INTELLIGENT DATA MINING

The Data Miner component provides a powerful and advanced analytical solution used to intelligently extract and index unstructured content and structured data from years of archived information. Once extracted, users can filter and export data for reporting and visualization - helping to create accurate and complete results for business analysis, audit and compliance reporting.

> " *ASG's Content Services Platform provides simplified access to Medicaid information that the Department of Health and Human Services needs, and allows us to serve them better in their pursuit to provide quality services to the State of South Carolina's population.* "

Russ Kaurloto
CIO
Clemson University

SOLVE COMPLEX CHALLENGES WITH MOBIUS

DIGITAL TRANSFORMATION

- Bridge information silos
- Drive business process automation to improve efficiency and empower users to focus on high-value interactions
- Unify sprawling content into single view with Enterprise Connectivity and Federation Services
- Improve interoperability across systems to improve productivity and extract value from content

CLOUD MODERNIZATION

- Embrace the cost savings, versatility and elasticity of true public, private and hybrid-cloud deployments

GOVERNANCE AND COMPLIANCE RISK MITIGATION

- Manage information in compliance with information privacy laws
- Secure information by encrypting at rest
- Create and retain records of all types of content

COST REDUCTION INITIATIVES

- Decommission and consolidate aging content applications
- Unlock the hidden value of unstructured data to create actionable intelligence

CREATE ENGAGING CUSTOMER EXPERIENCES

- Enhance customer service
- Improve information delivery to customers, partners and employees on any device or context

BENEFITS OF MOBIUS

- **Scale automation to content-rich processes** – Eliminate barriers to automating complex interactions between people, content, systems, and processes

- **Increase productivity and flexibility** – Securely access information anytime, anyplace, anywhere by employees, processes and applications

- **Improve operational performance** – Centralize policy management of information in a consistent and automated manner

- **Decrease compliance risk** – Govern information to be secure and compliant with regulations through a "set and forget" approach

- **Enhance collaboration** – Empower collaboration and maintain governance with a seamless integration with Microsoft® 365

- **Reduce total cost of ownership** – Consolidate and deploy systems in the cloud or hybrid environments to reduce total costs

- **Achieve faster time to value** - Deploy instantly with Docker and Kubernetes with high-scalability in the cloud

asg technologies® | A Rocket® company

ASG Technologies is a global software company providing the only integrated platform and flexible end to end solution for the information powered enterprise. ASG is the only solutions provider for both Information Management and IT Systems and has over 3,500 customers worldwide. To learn more visit www.asg.com.
