

## FINANCIAL SERVICES COMPANY USES ASG-PRO/JCL TO MODERNIZE DEVOPS AND DRIVE PRODUCTIVITY

ASG-PRO/JCL optimizes development process with streamlined JCL management and DevOps integrations

### BUSINESS BENEFITS

#### SEE VALUE FASTER

Include JCL management tools directly within users' favorite Eclipse-compatible interface for a seamless DevOps integration

#### SAVE MONEY

Eliminate expensive re-running of production mainframe jobs, reducing costs

#### IMPROVE ACCURACY

Reduce human error by automating JCL standards enforcement across the entire JCL lifecycle

### ! CHALLENGE

One of the leading multinational financial services companies was facing today's biggest challenge: releasing new digital services and features at the speed of its customers' expectations. Keeping this pace required efficiency, standardization and modernization across the company. However, with the company's existing JCL management, employees were not set up for continuous development and improvement.

The company was using a product that had two major disadvantages. First, it required developers to move across multiple environments during validation testing. IT would have to switch from development to production to test the code, and, if there were JCL errors, send it back to development to address them. It could take hours for developers to correct the JCL, check it for standards and errors, test it and then resubmit it to IT. Multiple iteration cycles also increased the likelihood of human error and delayed the entire DevOps value stream. Second, the product used COBOL programming standards, which deterred new developers, who the company wanted to attract to the mainframe, but who expect a more modern environment.

The company sought out a JCL management solution that would equip their developers—both new and seasoned—to streamline processes, reduce errors in workflows and save the company time.

## SOLUTION

As an ASG customer of 30 years, the company knew the value of ASG and ultimately selected ASG-PRO/JCL for its superior JCL management, Eclipse DevOps plug-in and Remote Scanning. Leveraging ASG-PRO/JCL, developers could use one interface to develop JCL, apply standards and formatting and then check their work before any new code was submitted to production. With JCL validation and run-time simulation, developers could not only discover errors proactively, but also eliminate the costly need to re-run the production of mainframe jobs.

ASG-PRO/JCL also offered Directed Execution, through which developers could remotely scan between environments. This capability saved valuable developer time by including JCL management tools directly within users' favorite Eclipse-compatible interface for a seamless DevOps integration. With reduced complexity, the company was able to see fewer errors and more value added to the business. What's more, by eliminating the need to maintain COBOL, the company could provide the modern development environment that incoming generations were comfortable working in—enhancing productivity and attracting talent. As a result, the company plans to increase the deployment of ASG-PRO/JCL, leveraging it as a critical enabler of their modernization initiative.

***“ Our developers love the Remote Scanning that ASG-PRO/JCL provides. The Eclipse plug-in opens doors to maximize our mainframe DevOps tooling by allowing developers to validate their JCL from within one interface. ”***
