

ASG Technologies is a leading provider of solutions for the information-powered enterprise. Our IT systems management portfolio provides an array of trusted and evolving products designed to increase enterprise IT resilience, stability and availability across mainframe, distributed and cloud platforms.

DEVOPS VALUE STREAM MANAGEMENT

[Learn More About AEO](#)

ASG-Enterprise Orchestrator™ (AEO)

ASG-Enterprise Orchestrator is a powerful DevOps value stream management platform that automates, orchestrates and executes critical business processes across your enterprise—mainframe to cloud—from a single solution that improves cross-team collaboration.

MULTI-PLATFORM WORKLOAD AUTOMATION

[Learn More About Zena](#)[Learn More About Zeke](#)

ASG-Zena & ASG-Zeke

ASG-Zena and ASG-Zeke workload automation solutions provide modern capabilities for scheduling and automating repetitive IT workloads at scale across the hybrid enterprise. This enables customers to increase efficiency and productivity by performing more work at scale across all major enterprise computing platforms, from mainframe to cloud.

PERFORMANCE AND CAPACITY MONITORING

[Learn More About TMON](#)[Learn More About TMON PA](#)

ASG-TMON® & ASG-TMON® PA

The ASG-TMON® and ASG-TMON® PA product suites provide comprehensive performance management and capacity monitoring of business-critical systems—from z/OS to CICS to Db2 and more. Business value stream views of technology, including alerts and metrics, improve the understanding of system health and resource provisioning, helping I&O teams reduce mean time to repair (MTTR) and accelerate the delivery of value.

DEVOPS-ENABLED JCL MANAGEMENT

[Learn More About PRO/JCL](#)

ASG-PRO/JCL

ASG-PRO/JCL provides modern capabilities to ensure customers can efficiently and effectively operate and manage error free, standardized and optimized JCL assets in a DevOps environment. They can manage JCL in leading integrated development interfaces (IDE) through an Eclipse plugin for Compuware Topaz and IBM IDz and automate core JCL functions using a RESTful web service API for continuous integration/continuous delivery (CI/CD) solutions like Jenkins.

MAINFRAME APPLICATION MANAGEMENT

[Learn More About ESW](#)

ASG-Existing Systems Workbench (ESW)

ASG-Existing Systems Workbench (ESW) is a suite of tools that enables developers to better understand mainframe COBOL code and ensure its quality during maintenance activities such as changes to design, specifications and code; testing; and documentation.
